

Getting Started with Document Conversion

This is a minimal single-page document intended as a smoke test for basic text extraction. It contains a title, a short introduction, and two plain paragraphs with no tables, images, or multi-column layout.

Overview

Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats.
