

# Quarterly Operations Report

## Q3 2026 - Document Intelligence Platform

### 1. Executive Summary

Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly.

### 2. Key Findings

The following observations were made during the evaluation period:

- Conversion throughput increased 34% after enabling batched inference.
- OCR accuracy on scanned invoices improved from 91.2% to 96.7%.
- Table structure recognition remains the primary source of extraction errors.
- Average end-to-end latency per document dropped to 1.8 seconds.

#### 2.1 Methodology

Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly.

images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly.

## **2.2 Deployment Steps**

- 1 Provision an OpenShift AI data science project.
- 2 Deploy the Docling Serve model server via the dashboard.
- 3 Configure a pipeline to route incoming documents to the endpoint.
- 4 Validate output against the golden sample set.

### 3. Risk Register

Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly. Docling is an open-source toolkit for parsing and converting documents into structured, machine-readable formats. It supports PDF, DOCX, PPTX, images, and HTML inputs, and produces a unified document representation that downstream retrieval-augmented generation (RAG) and information-extraction pipelines can consume directly.

### 4. Appendix: Glossary

**Docling** - Document conversion toolkit.

**RAG** - Retrieval-Augmented Generation.

**OCR** - Optical Character Recognition.

Note: figures in Section 2 are illustrative and generated for testing purposes; they do not represent a real deployment.<sup>1</sup>
